Deka-S-Financial Climate

July 1, 2024

The Deka logo is displayed in white text on a red background. It consists of three vertical bars of increasing height to the left of the word "Deka".

Deka-S Financial Climate in Q2 2024: Economic recovery at a snail's pace

- The S-Financial Climate improved for the third time in a row in the second quarter of 2024. However, the indicator is still only just above the expansion threshold of 100 points. The fact that this still represents an all-time high is due to the starting point of the S-Financial Climate, which was in the middle of the coronavirus pandemic. There is still plenty of room for improvement.
- The upturn is also reflected in a significant increase in the assessment of credit demand by the Savings Bank Boards. With supply conditions remaining the same, this means more competition among borrowers for the available funds.
- As far as monetary policy is concerned, expectations are that key interest rates will fall significantly further. Together with an improving economy, this would be a tailwind for further price trends on the equity and bond markets.
- When it comes to issues of public financing that are important for the capital markets, the Savings Banks advocate a fiscally conservative policy in Germany. An overwhelming majority of 80.4 percent rejects the financing of upcoming public tasks through more debt. Not a single one of the Savings Banks' Board Members is in favor of abolishing the debt brake.

S Financial Climate at all-time high

With a further significant increase, the S-Financial Climate reached an all-time high in the second quarter of 2024 (Fig. 1). However, the relatively short history of the indicator – which began shortly after the outbreak of the coronavirus pandemic – and the fact that the level of around 106 points still leaves plenty of room for improvement must be taken into account. While indicators related to the economy improved, indicators from the monetary areas tended to fall.

Economic climate still stagnating

The economic climate improved in the second quarter (Fig. 2). At the same time, the assessment of the economic

Sources: DekaBank, Research Center for Savings Bank Development, DSGV

situation has only increased marginally. This is in line with the assessment that the first half of 2024 will see macroeconomic expansion close to stagnation at best. Forecasters are pinning their hopes on the second half of the year. Consumers are regaining purchasing power thanks to falling inflation and sustained high wage growth. At the same time, the dampening effects of the restrictive monetary policy of the past few quarters are beginning to ease, not only in Germany but also among Germany's trading partners. This is the stuff that hopes of a revival in investment and exports are made of. This is also the view of the Savings Bank Board Members, who have significantly raised their economic expectations in the latest survey. This means that for the first time in a long time, the outlook for the future now exceeds the current assessment of the situation, which is a typical constellation for incipient recoveries.

Credit climate has declined

For the first time since the survey began, the credit climate – the balance of the savings banks' willingness to lend and the expected demand for credit plus 100 – has fallen below the 100 mark (Fig. 3). This indicates that it has currently become more difficult for companies to obtain loans. However, this constellation is not unusual for an economic turning point. Companies are asking for more loans again in anticipation of better times, while the financial sector is still cautious in view of the current weak state of companies and is keeping supply conditions constant. However, one can confidently expect this picture to change once it becomes clearer that the recovery is not a flash in the pan.

Monetary policy becomes more expansive

In June, the European Central Bank lowered the refinancing rate for the first time since the start of the interest rate hike cycle. The Savings Bank Board Members had anticipated this correctly. Ever since the survey at the beginning of the year, they had been assuming a more expansive monetary policy within the next twelve months. According to the current survey, the board members expect further interest rate cuts, which would reduce the current restrictive monetary policy (Fig. 4).

Policy

National debt is once again becoming an issue. After the national budgets of the established industrialized countries have been severely strained by the coronavirus and energy crises in recent years, most countries have not yet succeeded in consolidating their public budgets. With France, Italy, Spain, Belgium and Greece, but also the USA, a group of highly indebted countries has emerged which - with the

exception of the USA – could quickly run into refinancing difficulties if capital market conditions deteriorate. The recent rating downgrade of France and further warnings from the rating agencies regarding the political uncertainty in France following the European elections confirm that the financial markets are becoming increasingly sensitive. Germany is an exception here. But here too, the debt issue has flared up again in view of the tense financial situation and rising appetites.

Against this backdrop, the Management Boards of the Savings Banks are unanimously in favor of further control of government debt development through the debt brake currently enshrined in constitutional law (Fig. 5). Not a single vote was cast in favor of abolishing the debt brake. In fact, around a quarter of respondents are in favor of retaining it in its current form. The outsourcing of intergenerational investment tasks such as climate protection to special debt accounts outside of normal budgets is supported by 18%. Around 56% of respondents can imagine a moderate reform of the debt brake for more public investment – provided that an effective limit is maintained.

Conclusion

The Savings Banks expect the economy to recover at a snail's pace. Economic momentum in Germany is picking up, but only very gradually. Lending conditions are deteriorating slightly, although this is mainly due to a noticeable upturn in demand while supply remains more or less unchanged. Public debt is once again becoming an issue: in view of the high debt levels reached and the enormous challenges facing the public purse, the Savings Banks are calling for the financial solidity of governments to be maintained.

Deka-S Financial Climate Index: Construction

The Deka-S-Finanzklimaindex was developed in cooperation between the Research Center for Savings Bank Development at the University of Magdeburg, headed by Prof. Horst Gischer, and DekaBank with the involvement of the German Savings Banks and Giro Association (DSGV). The index is calculated from the results of a quarterly survey of 351 savings banks. It consists of ten subject areas, each of which can be divided into a perspective on the current situation and future expectations. In addition, there are changing special questions relating to the current economic or monetary situation.

The evaluation algorithm is based on the balances of positive and negative answers to each question. A completely neutral result results in an index value of 100. A completely positive assessment in all questions by all participants means an index value of 200 points, with the opposite negative variant the index value is zero.
